EVERGY SELECTS THE ONEVIEW[®] SCADA SYSTEM

SCADA International has been selected by Evergy to provide the industry-leading renewable asset management solution, OneView[®] SCADA. OneView[®] SCADA will replace the existing OEM SCADA systems, improve resource visibility, and create an overview performance and operational efficiency.

TOPEKA, KS — Oct. 2, 2019 — SCADA International announces that OneView[®] SCADA will be integrated at three of Evergy's wind energy sites. OneView[®] is a simple, flexible and all-in-one OEM independent solution for renewable operation and asset management. With a unified SCADA platform, Evergy's wind fleet will enable operators to efficiently monitor and control three wind projects that include Vestas V90, Siemens 2.3 and Clipper 2.5 wind turbine models.

Particularly, Evergy selected OneView[®] SCADA system because it offered the functionality, flexibility, and scalability needed to increase the speed and simplicity of monitoring and controlling multiple OEM renewable plants. The system also provides operational and maintenance cost benefits, by reducing the number of long-term SCADA service contracts needed. Operators, maintenance personnel, asset managers and management will have access to live and historical data along with advanced tools to visualize and analyze the data leading to smarter and more informed business decisions.

"The SCADA International OneView[®] solution will be instrumental in our success — as we are moving away from the traditional OEM model and bringing the operations and maintenance of our assets in-house," said Wes Mizell, Evergy's Senior Manager, Renewables Generation.

"With this system, we will be able to select the options we wanted in a SCADA system; we can customize the user interface to suit the needs of the individual sites, and access custom reports that support our business model and regulatory reporting requirements. We are excited to work with SCADA International on this project and are looking forward to working with a company that cares about what the customer wants and to support Evergy and our SCADA system in the future."

###

About Evergy

Formed by the merger of Westar and KCP&L in 2018, Evergy, Inc. (NYSE: EVRG) provides clean, safe and reliable energy to 1.6 million customers in Kansas and Missouri. Today, half the power supplied to homes and businesses by Evergy comes from emission-free sources, creating more reliable energy

with less impact on the environment.

About SCADA International

SCADA International enables the renewable energy sector to optimize production and reduce cost, through intelligent software and hardware solutions that capture live production data from various sources and turn them into decision-supporting information.

Headquartered in Denmark, SCADA International employs close to 100 wind and SCADA specialists at offices in Germany, Poland, Ukraine, United Kingdom and USA. The company is certified according to ISO 9001, ISO 14001 and OHSAS 18001.
